MARQ

Marquee Achievement & Readiness Quotient

Beyond Training. Towards Excellence.

How the platform works — for programme leadership, administrators, assistants, mentors and trainers.

What MARQ is

MARQ is the single source of truth for the Top Notch Marquee Training Programme. It follows every selected student from the day they are added to the programme until they accept an offer — training, daily attendance, assessments, coding practice, mentoring, applications, interviews and placement — and turns that record into scores, rankings and reports that leadership can act on. Every number in MARQ comes from a recorded event; nothing is estimated.

How it is built

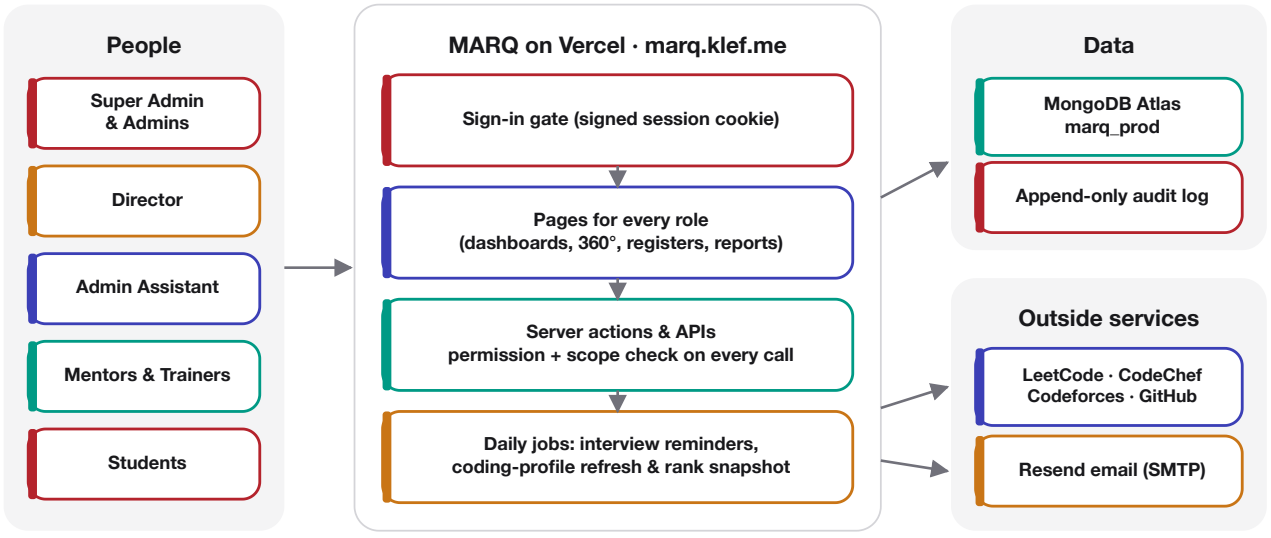

Figure 1 — People reach MARQ in the browser. Every request passes the sign-in gate, and every page and action checks the user's permissions and data scope on the server before touching the database.

Who uses it

Role	What they do in MARQ	Sees
Super Administrator	Full control: users, roles, settings, every module	Everything
Administrator	Student records, announcements, reports, **feedback inbox**	Whole programme
Admin Assistant	Imports, student accounts, **posts the daily register**	Whole programme
Director	Executive dashboard, reports, **approves attendance changes**	Whole programme (read-only)
Training Administrator	Programmes, batches, sessions, assessments, coding targets	Whole programme
Placement Administrator	Companies, opportunities, applications, interviews	Whole programme
Mentor / Trainer	Evaluations, marks and attendance for their own students	Assigned students only
Student	Own dashboard, training, results, coding profiles, applications	Own record only

The student journey

One record per student connects everything below. The Student 360° page shows all of it on one screen.

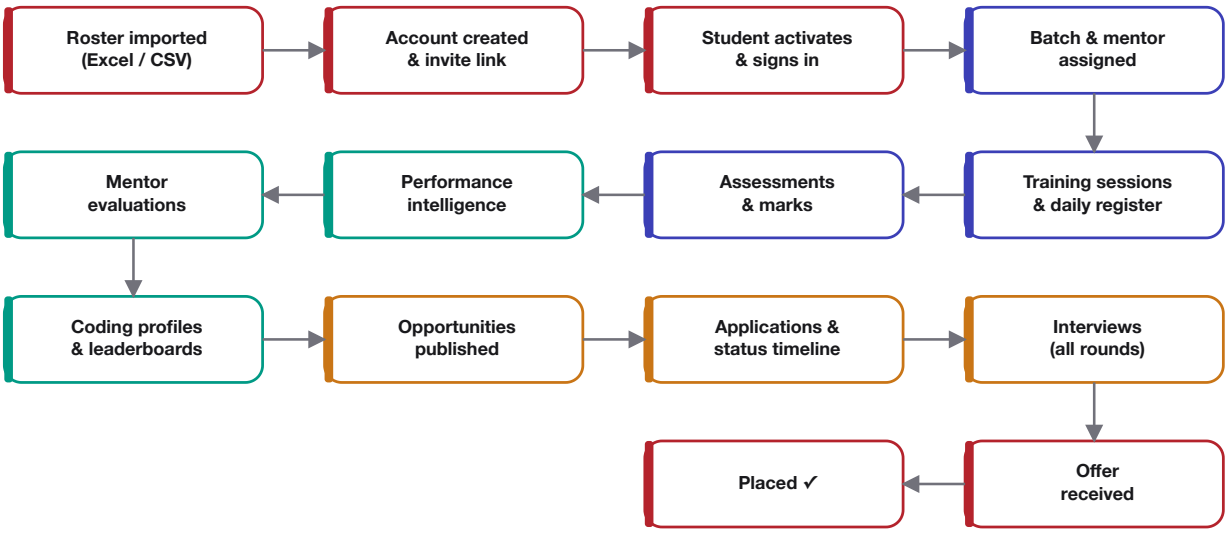

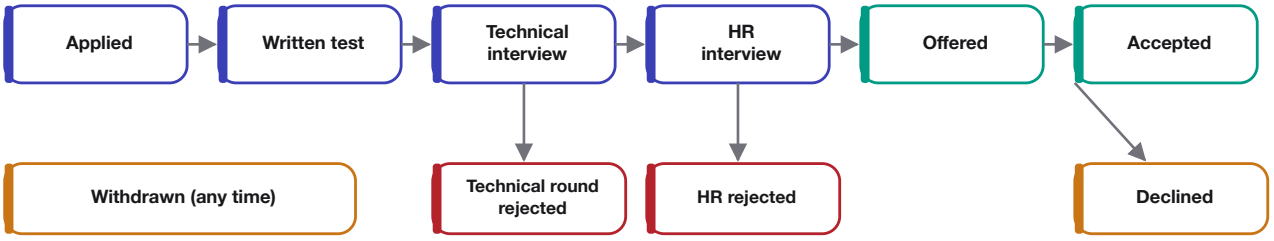

Figure 2 — From roster to placement. Each step updates the student's scores, timeline and the programme dashboards automatically.

Application lifecycle

Every change keeps the previous status, who changed it, when and why — nothing is overwritten.

Figure 3 — Application statuses. Administrators can add custom statuses in Settings.

Student registration & onboarding

Students register themselves at **marq.klef.me/register**. Only emails already on the Top Notch list are accepted; the activation link goes to the student's inbox only. Coding profiles and the profile are mandatory before the portal opens. Step-by-step guide with screenshots: *docs/STUDENT-REGISTRATION.md*.

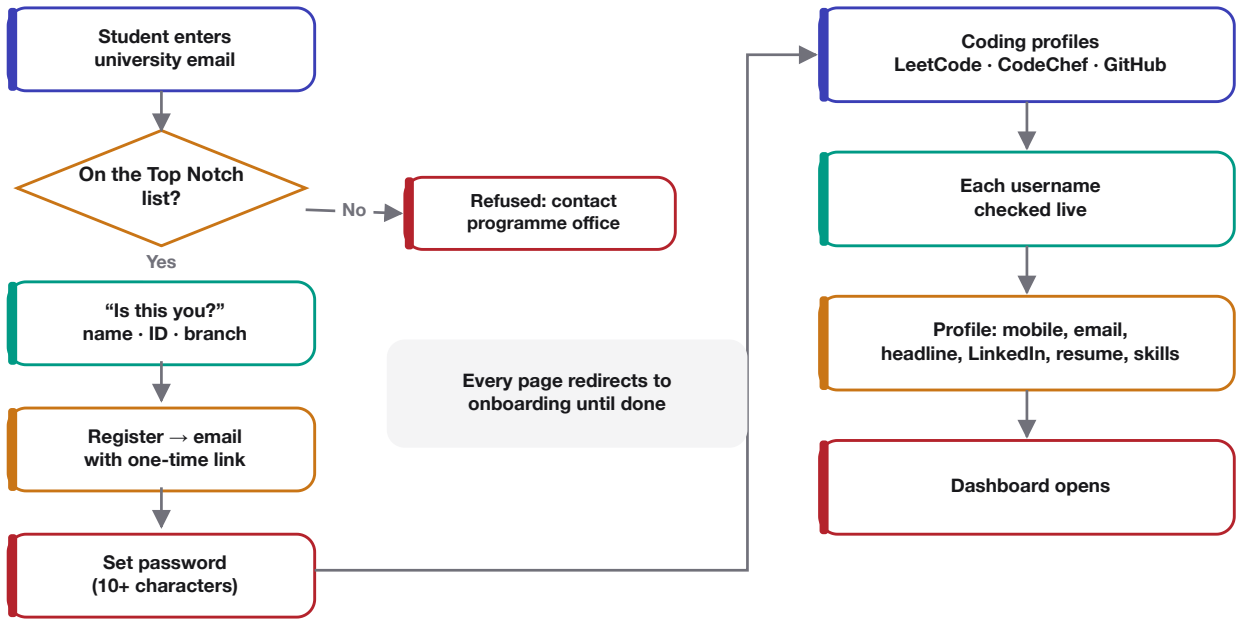

Figure 4 — Self-registration and mandatory onboarding. Admin-invited students start at "Set password".

Company drive status

Every published drive asks "Status of the candidate for this drive" with the programme's nine options (not applied, no response, online exam attended / rejected, TR qualified / rejected, HR qualified / rejected, offer). Answers update the application timeline and the *Drive status* report.

Feedback

Anyone can send feedback from the sign-in page or the menu; signed-in users' name and email are filled automatically. Administrators read and resolve it in the Feedback Inbox.

Daily attendance register

Attendance follows the college sheet: one row per student and period columns 3, 4, 5, 6, Lunch Break, 8 and 9. The Admin Assistant posts it once per day; after that it is locked and only the Director can approve changes.

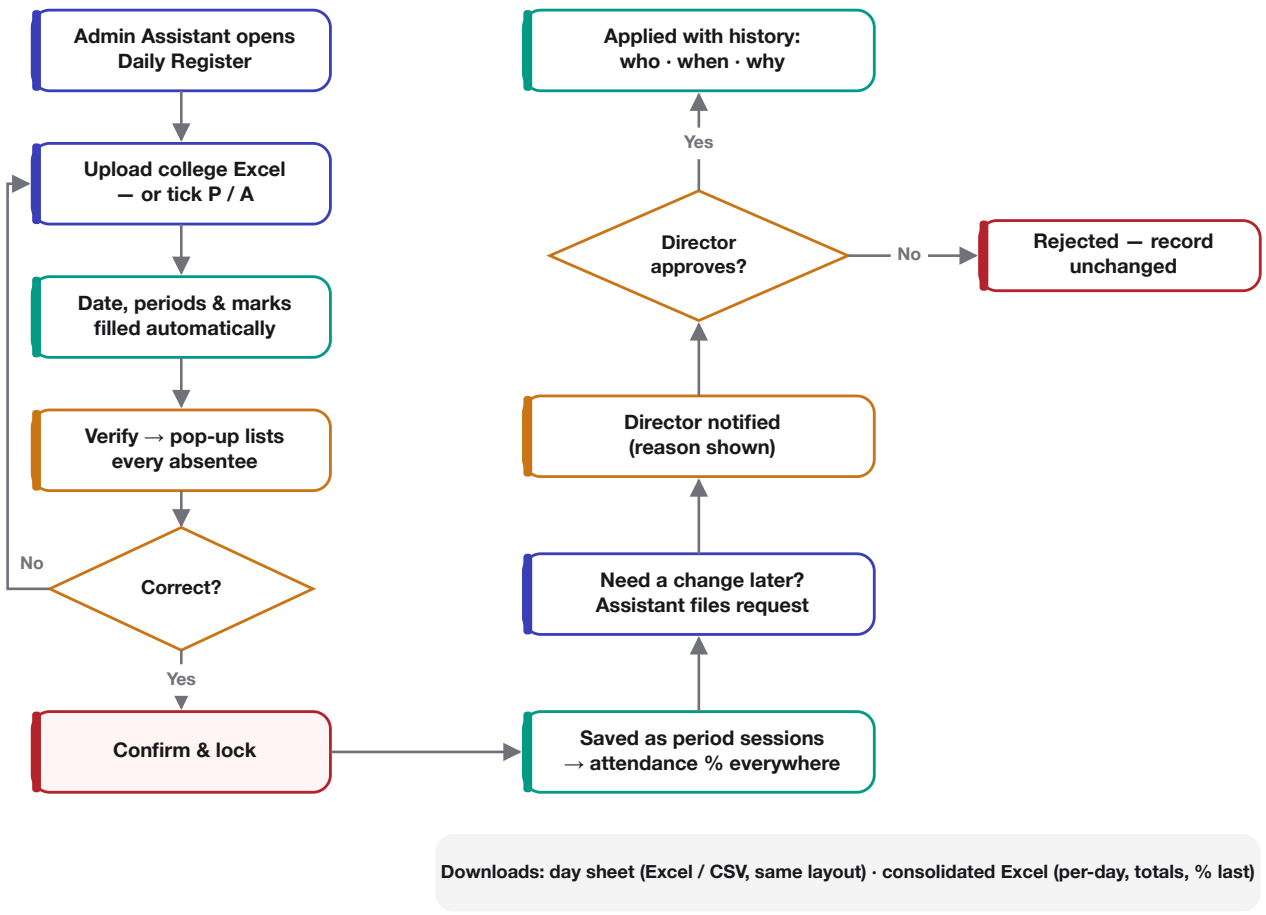

Figure 5 — Upload or tick → Verify (absentees pop-up) → Confirm & lock → change requests need Director approval.

Upload

Excel (.xlsx) or CSV in the college layout. MARQ reads the date from the header (e.g. 02.11.2026) — or the file name — plus the period numbers, times and every P / A. Blank cells count as present and are reported.

Downloads

Day sheet in the same layout (Excel / CSV, absentees shaded) and a consolidated workbook: *Summary* (per-day attended/held, total held, attended, absent, percentage last) and *Detailed* (every day × period).

Accounts, roles and security

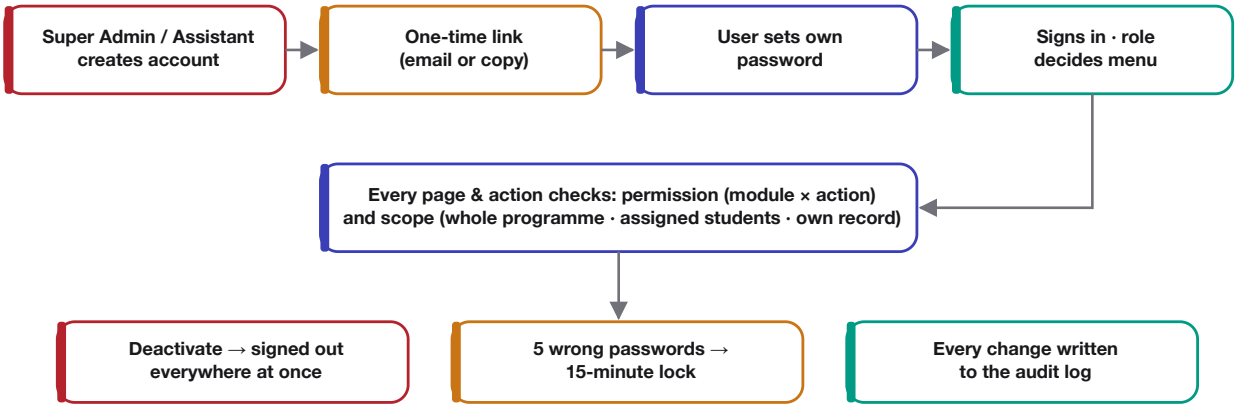

Figure 6 — Nobody types or receives a password from someone else. Hiding a button is never the only protection: the server re-checks every request.

Data isolation

Students only ever load their own record — changing a link or an ID returns “not found”. Mentors and trainers only see their assigned students.

Approvals

Attendance corrections need the Director, and nobody can approve their own request.

Audit trail

Imports, registrations, attendance, marks, application statuses and role changes are recorded with who, when, before/after and IP.

Exports

Every report respects the viewer's role and scope; spreadsheet formula injection is neutralised.

How scores are calculated

Each result becomes a percentage (marks ÷ maximum × 100). A dimension is the average of its results; missing data shows "—" and is never counted as zero. Overall and Readiness are weighted averages over the dimensions that have data. Weights, the category mapping and thresholds are editable in Settings.

Dimension	Comes from	Overall weight	Readiness weight
Technical	Technical, Domain-specific assessments	20	20
Coding	Programming, DSA, Coding assessments	25	30
Aptitude	Aptitude, Logical, Verbal	15	10
Communication	Communication skills	15	15
Interview	Mock interviews	10	20
Attendance	(present + late) ÷ (present + late + absent)	15	5

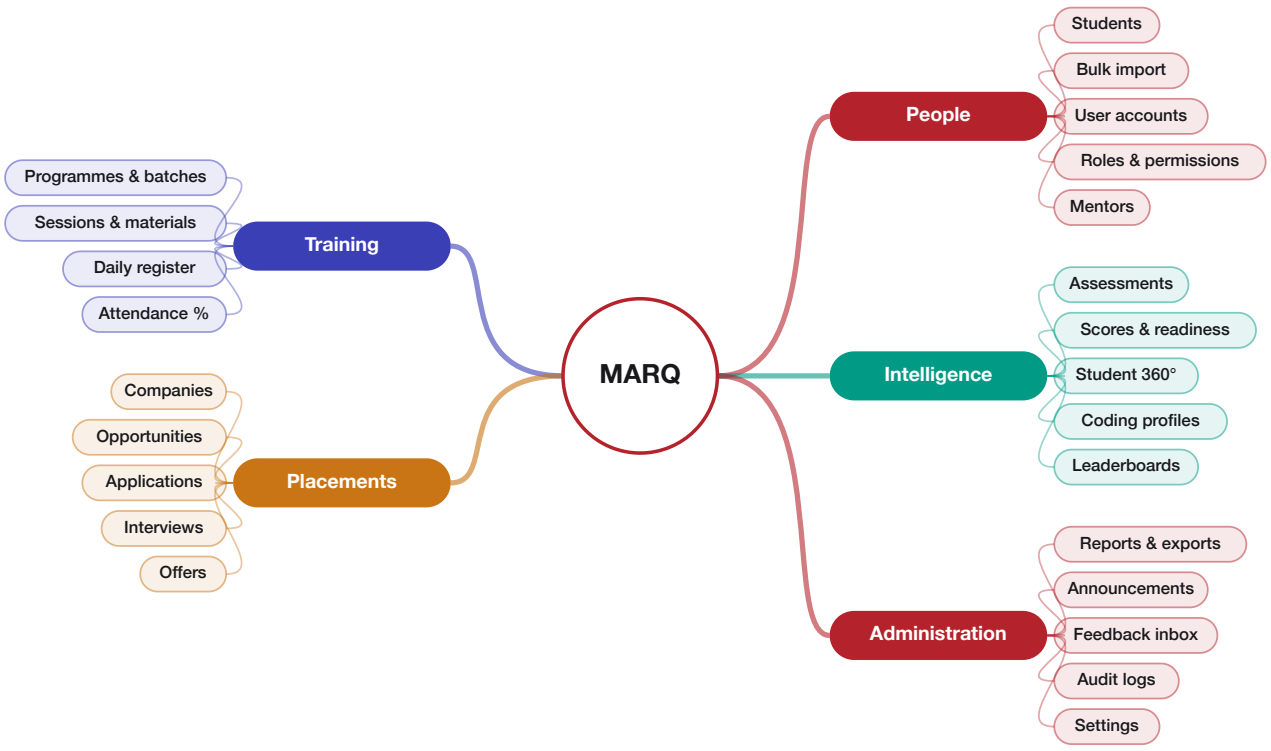

- **High performer**: overall ≥ 75 · **Needs attention**: overall < 50 or attendance < 75% · **Improving / declining**: trend of the last six results ≥ +2 / ≤ −2 points per assessment.

Coding points and leaderboards

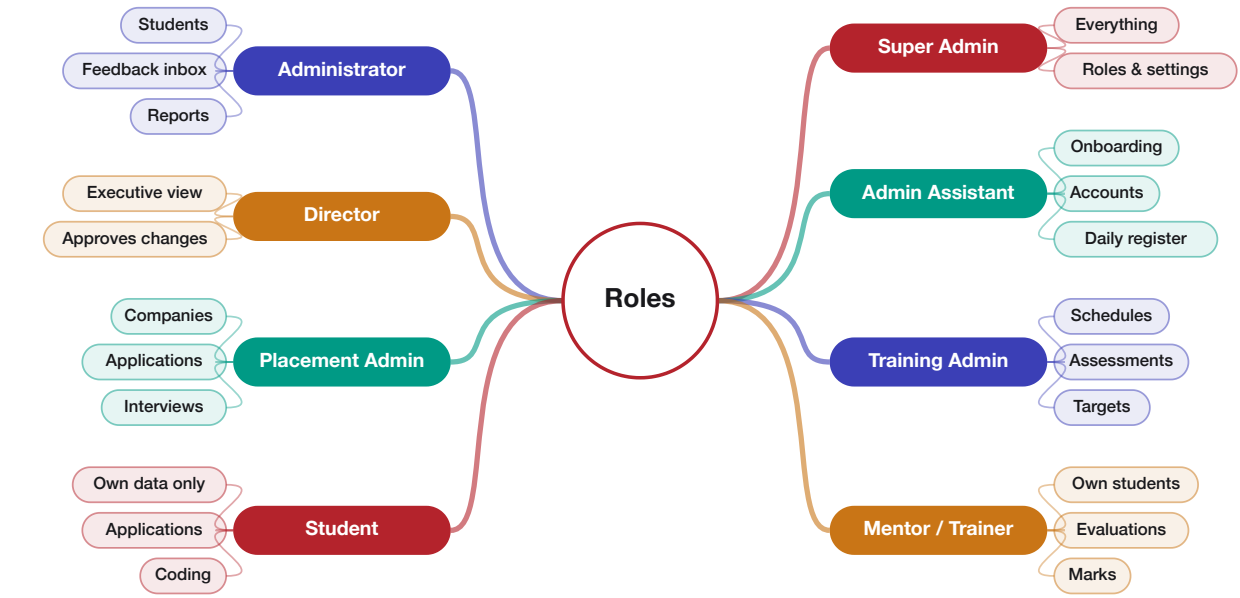

Platform	Coding points formula
LeetCode	solved × 10 + (rating − 1300)² ÷ 10 + contests × 50
CodeChef	solved × 2 + (rating − 1200)² ÷ 10 + contests × 50
Codeforces	(rating − 800)² ÷ 10 + contests × 50
GitHub	shown on the profile (repos, stars, contributions) — not scored

Points are summed across platforms, ranked across the cohort and within each batch, and recorded daily for the rank-history chart. Profiles refresh every night. Batch **targets** (dated point goals) flag students as *met*, *work harder* (≥ half) or *improve immediately*.

Mind map — modules

Mind map — roles

Getting started checklist

1. **Activate** the Super Administrator account from the one-time link.
2. **User Management** → create staff accounts with the right role (each gets an invite link).
3. **Training** → create the programme and batches; allocate trainers; add coding targets.
4. **Students** → bulk import (template provided) → select → assign batch & mentor.
5. **Students** register themselves at marq.klef.me/register — or select → *Create accounts & invite*. Both need the email domain verified in Resend.
6. **Daily Register** → the Admin Assistant posts attendance every day (upload the college sheet or tick), Verify, Confirm.
7. **Assessments** → create, enter or import marks → scores update everywhere automatically.
8. **Placements** → add companies, publish opportunities → students apply and answer the drive-status question on every drive.
9. **Reports** → Excel / CSV / print for any module; consolidated attendance from the Daily Register.

Where things are

Need	Go to
Today’s attendance	Daily Register
A student’s full picture	Students → open the student (360°)
Who needs attention	Overview · Performance Intelligence
Placement progress	Placement Analytics · Applications
Spreadsheets for leadership	Reports (Excel / CSV / print) · Daily Register downloads
Who changed what	Audit Logs
